

Ok. January 2023. *Fentanyl.*

*imbued with the energy of a thousand suns;*

*Needles in mah arm.*

*Needles in mah neck.*

*And at the end of the day you aint nothin but a fuckin speck*

It fuckin felt like i had a million little loops, the ones that always seem to settle

affah you drop your laces on the floor-like

Infinity loops, you know-it was like my dna, every fuckin blood cell was an infinity loop-does that make sense-coursing through my body and i was charged with enough electricity that all the fuckin shit ass dirty blood in my body was going to come flyin outta my pores and

Drench the entire room in purple blood or whatever the fuck

So you thought it was the fentanyl-

-no i thought it was the speed, the dirty crank and the fatty drip they had boosted into my arm without me knowin that had me loopy-well didnt you pull the iv out and like a burst pipe it woulda gone up splattering the nurses face in that red-

i had fuckin overdosed so i wasn't sure but the thing i can be sure about is that

i could feel the jules poundin the walls of skin trying to get outta my system-20,000 of those fuckers

-and heres the thing that wigs me the fuck out and gets me to get them to rip the needles outta my arm-hold the tape so the blood dont squirt-

im howlin for my dead mother-

like a kid whose about to get the shit kicked outta him by the headmaster - i knew i was fucked then-so i sit up and my left foot is numb feels like jelly-fuckers are goin to cut my foot off and say i shot myself in the foot-

Fuck em-nah i didnt say that i was still howling for mom- two guards hold me down-two shots one in each arm-fuckinnnnnn benzocainnnnnneeee i got about 16 minutes before its nap time-a long nap-and in my ear a fuckin voice and you wont believe this its calmly repeating its time to go Brandon. Let's go Brandon.

its time to go get up and go get me my fucking mom i scream-

What then-

-another fucking doc, sweet talking me, youre gonna be ok, you came in here yadadadadah, and get this another nurse, thick fuckin accent and with these eyes they aint evil eyes but the kind of eyes were i knew it might just not be the foot they were out to take.-

So you got the fuck out

Yea, dragged myself back, crawling and screaming they tried to kill me again. That part don't matter, what i think i'll always remember is the feeling-like my blood was alive-like it was charged with something-like a sun a star something from outer fuckin space.

HAHHHAHAHAHA and now for something completely different:

[https://disney.fandom.com/wiki/The\\_Walrus\\_and\\_the\\_Carpenter](https://disney.fandom.com/wiki/The_Walrus_and_the_Carpenter) imagine a reality wherein i have my lived reality (read: IMAGINE A reality to include thought, physical actions, routine, behavior, misc. to defined) (Present moment: x) that moves in accordance with linear time while at the same time we have another reality (Future Reality: y) that adjusts according to epherma outlined/asscoiated with "Present Moment"; x there is a room wherein there is a screen wherein one (or mutiple groups/communities) can view a fully immersible view (develop: VR/Deepfake tech/AR/Geospatial and topographic Information) of a communityover the course of the next 12345 years... (call it infinite years) this is based on (and being overly reductive here in relation to an algorithm) autocomplete now see below related to heisenbergs uncertainty principle in that one can manipulate the present (x) and have affect in the fully immersible view noted above (Future reality Y)-Why is this not simply a simulation, the carpenter would ask? because of the incorporation of the quantum tech (name to be determined) that can affect physical particles quantum tech that can affect physical particles in x and therein at y at the same time that is noted above to be called thought . how can thought be considered a physical particle, asks the walrus? imagine scenario wherein we have mapped/scanned/uploaded electromagnetic waves from the brain to create an alphabet t/langauge specific to an indiviual-an auditory mirror of a persons thought, exclaims the carpenter! Why yes, the walrus states! The carpenter continues, based on classical conditioning/behavioral pyscology and this mirror (is it correct to call it a mirror?) and this system of thought control physical particles/thought in x can be modified (conditioned) and therein adjust in the moment in the Y (Future Reality). the walrus, thinking to himself, rubbing his ivory tusks with his slippery flippers, well if we have such a mirror can't we affect (read: reverse engineer) the manipulation of physical items from that future Y into an individuals present moment x The carpenter, confused at first exclaims, why i dont see why we couldnt! (FUCKING TALISMAN GAME FTW/De Broiglie Hypo/Plancks Constant as it relates to mappin/scnaning of electromagnetci waves from brain) Hesienbergs Uncertainty Principle kinda states that two intial variables (complemntariy variables or conjugate variables) have a hard time maintaining their approximate meaning (read: relationship) due to momentum and therein are difficult to predict. Application of marxism to the ecosystems of AI companies/orgs/models

2014-xi speaking of information as a "factor of production"; think in relation to marxism or the development of a new scientific marxist approach to information/data??

social credit system-deployment of social use theory by chinese with relation to data/information

next step-ecosystem wherein we have numerous AI companies collating and organizing data-where does information/data exist if we imagine this ecosystem as being governed by tenets of classical marxism.

see below in relation to malthusian manager, the technological improvements that would have been the reward of advances with means of production dissolve ( *total control is the only improvement*). Population control, malthus is our new god.

Marx-"commodity is in the first place an **object** outside of us.

Matter wave-treating matter (objects) as particles

Ability to move points of data from future y and have them affect present x

Chatgpt as a marxian critique on the development of information, data, and information systems.

The implosion of marx's theory of the development of social division of labor-we contribute to the development of these systems. Transformation of exchange (my work in building your algorithm or model is being compensated by way of access to information, products that exist outside of standard exchange economy)

Fluidity of language versus the predictability of objects with mass. Juxtaposition of the aforementioned dynamism of human language (its development, its use, its ability to fail) with the predictability of physical routine)

Given that "this" is potentially a federally funded project (by way of the injection of federal funds into private endeavors) how is the government assigning use value to each individual's contribution

Toward a new science-thought utilizing concepts from quantum mechanics (either validated or disproven) and marxist economic science...to develop?

Labor put in by the model? Social division of labor as applied to the models.

The model is trained, brought up to speed, learns to "Work" on its own. Another develops another model, trains it for its own use (or own objective) and slowly a class system emerges amongst these different models-who leads the revolution, the models or those that trained the models?

The labeller disappears at what point?

recaptcha -my cognition is exchanged for access to a free product (commodity) that commodity while free or lacking exchange value in the lay users mind gains an exchange value in the owner of that commodity (data) which is then sold on another market. Nothing is free.

Development of a new economy. You dont develop new products anymore, you develop new consumers. You change the consumer and re cloth existing product (e.g data).
